**Abstract**

An FK space  $X \supset \phi$  is  $\Lambda$ - semiconservative FK space if  $X^f \subset \lambda(S)$ , where  $\lambda(S)$  is the space of  $\lambda$ - convergent series and  $X^f$  is  $f$ - (or sequential) dual of  $X$ , that is

$$X^f = \{(f(\delta^k)) : f \in X'\}.$$

In this work, we give some definitions and theorems related with  $\Lambda$ - semiconservative FK spaces.

**Keywords:** FK spaces,  $\beta$ - dual,  $f$ - dual, Semiconservative FK spaces.
